

Add your DNS and keep customers online

DNS entries are your server addresses. Add two: if one goes down, customers switch to the other.

► Tap to watch: Add your DNS

<https://parceria.tutoriaisdoapp.online/en/dns/#video>

1

In the menu, click **Domains**.

2

In **Domain Groups**, click + and create a group (e.g. **Main**). DNS 1 and DNS 2 will both go in it.

3Click **Add Domain**.

↔ Transfer

+ Add Domain

4

In **Domain**, type the address **without** `http://`. For **Port** and **Protocol**, use your server details. Name it in **Label** (e.g. **DNS 1**), pick the group in **Group** and click **+ Add Domain**.

Domain

seudominio1.com

Without http:// or https://

Port

80

Protocol

HTTP

① Traffic is unencrypted. Consider enabling HTTPS for secure connections.

Label (optional)

Nome da DNS

Group (optional)

Grupo 1

Cancel

+ Add Domain

5Repeat for the second one (**DNS 2**), in the same group.**6**

Each DNS gets an **ID** (numbers only): Sigma and your system ask for it. Copy it with the icon next to it.

 seudominio1.com

Port 80 - HTTP

 **DNS 1**  **Grupo 1**

ID: 10000000000000000001

Use a DNS just for MaxPlayer, kept out of your resellers' lists and apps. If the public DNS is attacked, your MaxPlayer customers stay online.

Official Solutions material for MaxPlayer resellers.
