

Connect your own system to MaxPlayer

Have your own panel or site? Your system can create logins by itself. **Send this page to your developer.**

This page: <https://parceria.tutoriaisdoapp.online/en/own-panel/>

- ✓ API address: `https://api.maxplayer.tv/v3/api/public`
- ✓ The [API key](#) goes in the `Api-Token` header.
- ✓ Send a browser `User-Agent`: without it, the site protection rejects the request (error 1010).
- ✓ Full documentation is in the panel: **Public API > Swagger documentation.**

Example: create a customer

```
POST https://api.maxplayer.tv/v3/api/public/users
Api-Token: YOUR_API_KEY
Content-Type: application/json
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64)
```

```
{
  "domain_id": "179000000000000001",
  "iptv_user": "john8841",
  "iptv_pass": "x7Pq29",
  "fullname": "John Smith",
  "max_devices": 2
}
```

- ✓ `domain_id` is the DNS ID (up to 19 digits): store it as **text**, never as a number.
- ✓ Without `username` and `user_password`, the customer signs in with the list username and password.
- ✓ Before creating, check if the customer exists (`POST /users/search`) so you never create the same login twice. A duplicate login returns error **409**.
